Databases: MySQL, SQL Server
Version Control: SVN
Operating Systems: Windows, Linux, Mac OS X

EMPLOYMENT

October 2013 – Present	Overstock.com	SOFTWARE DEVELOPER
March 2005 – October 2013	Rocket Science Ltd.	SOFTWARE DEVELOPER

Have closely been involved with a number of software solutions from their inception directly through to completion in this position. Worked both with a small team and independently on a number of software solutions primarily in, but not limited to, the agricultural industry including:

- A multi-user feature-rich Windows application / CRM system used in an animal testing laboratory. This was developed in a very short time period (4 months), but was achieved by working closely with the lab manager and involved regular discussions with him.
- A Java desktop application for practice management of a local orthopaedic surgeon's consultancy rooms – developed over 10 years ago but still in regular use. And is regularly in need of iterative updates (new reports / requirements etc.).

I've also taken on more of a leadership / mentor role in recent years due to the company's ongoing policy on hiring students from Institute of Technology, Sligo on work experience.

ONLINE LEARNING

April 2013 – June 2013	An Introduction to Interactive Programming in Python Rice University Coursera
March 2013 – April 2013	CS169.1x Software as a Service BerkeleyX edX
October 2012 – March 2013	CS50x Introduction to Computer Science I HarvardX edX

HOBBIES & INTERESTS

I am an avid movie and television watcher, and enjoy listening to music and podcasts. I also enjoy stand-up comedy. Am a fan of gadgets and keeping up to date with technology.
